PROFESSIONAL SUMMARY

Quality Assurance Analyst with nearly 2 years of experience in the Software Development Lifecycle (SDLC), specializing in manual testing for web and mobile applications. Proven ability to review requirements and user stories to design detailed test cases, execute functional, regression, smoke, and exploratory testing, and manage the full defect lifecycle using industry-standard bug tracking tools. Experienced in Agile/Scrum environments with active participation in ceremonies, close collaboration with developers and Product Owners, and a strong focus on delivering stable, reliable software. Eager to expand into test automation as a next step in professional growth.

EDUCATION

Catholic University of Santos February 2025

Bachelor's Degree in Systems Analysis and Development

TECHNICAL SKILLS

Testing Types: Manual Testing, Functional Testing, Regression Testing, Smoke Testing, Exploratory Testing, System Testing, Acceptance Testing (UAT), Usability Testing, API Testing, Performance Testing (basic)

Bug Tracking & Test Management: JIRA, Azure DevOps (Boards, Test Plans), TestRail

Automation (growing): Cypress, Selenium, JavaScript, TypeScript, Cucumber, Gherkin/BDD

Methodologies: Agile, Scrum, SDLC, Shift-Left Testing, requirements review, acceptance criteria definition

Other Tools: Chrome DevTools, Git/GitHub, Insomnia, Vysor, Android/iOS Emulators, SQL (basic), HTML/CSS

WORK EXPERIENCE

Junior QA Analyst December 2024 – August 2025

Mosten . Santos, São Paulo, Brazil

- Reviewed requirements, specifications, and user stories to design comprehensive test cases covering functional, non-functional, system, and acceptance (UAT) scenarios for web and mobile projects.
- Executed manual test cases to validate functionality, usability, and performance, ensuring full alignment with business rules and acceptance criteria across each sprint.
- Performed regression, smoke, and exploratory testing to identify and prevent critical defects from reaching production.
- Managed the full defect lifecycle in JIRA and Azure DevOps: clear documentation with detailed steps to reproduce, screenshots, and logs; prioritization with the team; and re-validation after fixes.
- Maintained accurate and up-to-date testing documentation in TestRail and Azure Test Plans, ensuring traceability between requirements, test cases, and results.
- Collaborated closely with developers and Product Owners to clarify issues, validate fixes, and contribute to acceptance criteria definition during Scrum ceremonies (refinements, plannings, and reviews).
- Supported automation coverage expansion using Cypress, JavaScript/TypeScript, and BDD (Gherkin/Cucumber), contributing to approximately 40% reduction in manual regression effort.
- Performed API testing and validations using Insomnia, and supported mobile application testing through emulators and Vysor.

Software Quality Assurance Intern January 2024 – December 2024

Mosten . Santos, São Paulo, Brazil

- Executed exploratory and manual test cases for web and mobile features, ensuring functional coverage and early identification of UI/UX inconsistencies throughout the SDLC.

- Designed test cases and test matrices from requirements documents and user stories, documenting results and defect evidence in Azure DevOps.
- Participated in Agile/Scrum ceremonies, supporting requirements reviews and acceptance criteria discussions before development began (shift-left approach).
- Gained initial hands-on exposure to test automation with Cypress and Selenium, collaborating on regression suite expansion with Git/GitHub.

Projects i've worked on:

Ecoporto

Access control system for the port company Ecoporto, automating entry and exit management in bonded areas in compliance with Brazilian Federal Revenue regulations. Centralized accreditation of employees, contractors, and vehicles. Stack: Cypress.

Global Ship – Macaé

Operational management system for the Port of Macae: vessel scheduling and tracking, cargo management, and yard control. Stack: Cypress, Gherkin/BDD, Azure Test Plans.

BuildUP

Management system for prison labor programs in civil construction, registering eligible inmates through facial recognition and tracking qualifications. Stack: Cypress, Cucumber, Gherkin.

Brasil Export

Mobile application for Brasil Export Forum members, providing centralized access to news and integration with Google Calendar. Stack: Vysor (mobile testing).

Ultracargo

Logistics and operational management system for the transportation and storage of chemical and gaseous products. Stack: Azure DevOps.
